TRACKSIDE & TUNNEL LIGHTING

- Lighting can be supplied and installed by our P.T.S. Certified Staff, all of whom are trained for working on ac and dc electrified lines. Fully trained Lookouts and COSS's are also available.
- Ground spikes, lay-flat ballast baskets or platform tripods are available to suit individual needs. All sites are CAT scanned prior to inserting ground spikes.
- For your convenience and to cut down the length of possession time, lighting and equipment can be installed prior to the night of the job.
- Our staff maintain and modify the lighting as required throughout the shift to ensure safe working (this can include re-fuelling, moving or adding lights as conditions change, etc.)
- Site engineers are available for the duration of the shift.
- At the end of the shift Torrent Trackside personnel dismantle, remove from site or make safe all lighting equipment as required.
